## Basic parts of computer and their definition pdf

I have (5) CD-ROM drives, (3) 3/5 Diskette drives, (1) Zip 100 drive, (8) Video card, some power supplies, (1) Mini large PC case, an alpine-disc switch. I have a bit of random stuff around too. If I could do something like doing a kind of KVM or something I would like that, but if I can do anything at all just recycle the recycle stuff (i.e. Be Green) I would really like that. I'm not sure what the metal is on PCB, I said that it's gold. I get a lot of computer stuff for free, as I'll take the same junk. I try to recycle as much of it as I can. I am fairly new to this part however. I've read that fumes are rather dangerous from the PCB. Anyway, if you can think anything, please let me know. I don't have descendants/desolder anything really, so this part will all be hit and miss. I figured it won't be that difficult, and I learn rather quicker as is. If I can save capacitor and these I will. I have a cheap multimeter, which I buy from Freight Harbor Freight Tools. So I'll be able to Google and do some reading to find out how to test if anything has juice in it and the polarity. I stumbled upon this site, and after reading just a little bit of being surprised by others. Hats-off to the vast majority of you! If you have any suggestions, please don't hesitate. Thank you. PS – I may be able to get a video around at most of it later. Whether you're building a new computer or doing shop for ameas, you have many places to choose from. This week we want to know which online and offline details you trust the most in for low prices, good return policies, and great selections on everything from CPUs to graphics cards. We just updated our PC guide build, and we know that may have inspired a number of you to go shop for your own components. Using sites like PCPartPicker make sure you always get the best price is definitely the way to go, but some details are better than others when it comes to replacing DOA elements or honoring those low selling prices. This week, we want to hear your favorites! The call for contenders is closed! To see which of your prospects received enough support to get it going into the top five, top on in our five Hive features, the five best places to buy computer parts. Don't forget to cast your vote for the all-out winner! Whether you're building a new OR commercial PC for allegations, you need a trusted place to buy. Not all... Read your vote in the discussions below! To cast your vote, follow these guidelines: Follow this format for your voters, including bold print. If not, it won't count: A PICTURE OR SCREENSHOT OF THE BEST PLACES TO BUY Computer PARTS: [BEST ACHe COMPUTER PARTS] Why: Why does this site or store that you think is the best? Maybe you put their trust for fast shipping and great prices. Maybe they have great customer service, or do product reviews and videos to help you be an informed buyer. Make your case! Don't copy nominated! Instead, if someone's your pk nominated, star to give it a boost, and respond to your story instead. Please don't let that not enter, direct comments on this post. They'll just get pushed down. Save your stories to submit to others! If you're not sure what we meant, just check out the nomination by writing us below. We'll give you a head start, and should all be in the proper format, so you can just follow our lead. Make a suggestion for a topic? Send us an email at tips + hivefive@lifehacker.com!Photo by Rasmus Lerdorf. Whether you're building a new OR commercial PC for allegations, you need a trusted place to buy. Not all details are the same—some offer great discounts, good customer service, and even useful tools for buying gear for your money. This week, we're checking out five of the best, based on your nomination. Building your own computer doesn't have to be super expensive, and there are a lot of ways you can save money in the process. Earlier in the week we asked you to tell us where you go - online or offline - to buy computer components after you were putting together your speed list. You weigh in with tons of great mates, but we only have room for your top five. Here they are, in no particular order: Dear Lifehacker, I'm in the market for a new computer. My friend says it's cheaper to build one... Its more Lamical Center operates both bricks-and-mortar stores and an extensive online store, both packed with everything from CPUs and momentboards to pre-built computer systems, laptops, and monitors. Many people know Micro Center especially for frequently-incredible deals on CPUs, in many cases hundreds of dollars lower than available anywhere else online—and appear often in your low-cost list when you start building your computer at a site like PCPartPicker. Physical stores are usually laid out and are blocked like geek amusement parks, with tons of systems to play with, gaming consoles are killing time on, and many opportunities are actually touching and trying out the technology you're interested in before buying it — not to mention a massive center the massive center is packed with components, cables, cooling, tubes, and more -- great for any system builders who lack a cable or need that something extra finish building them and don't want to wait for shipping. Those of you who nominated Micro Center also mark the popularity of its brick stores and mortar stores, with the big discounts and bundles available in person. They're not quite all over North America yet, but they're in enough big cities to make them a great destination, and even if you're not locked in one, their online stores have plenty of gear for the same at equally large prices. You can even order online for in-store pickup, and if you're running into trouble on what components to purchase, employees are in-store generally knowledgeable, which is a breath to refresh fresh air. Don't take my word for it notwithstanding—he loves the nominated threads here. NCIXNCIX (with its U.S. counterpart, NCIX US) earned Neweg Canada's title a short time ago, but since grown far above and beyond the comparison. NCIX is a juggernaut in its own right, serving both Canadian and US buyers and a wide variety of computer components on their website at very competitive prices. If you need a new video card, hard drive, case, or CPU, NCIX has you covered. Their stock doesn't end up there though, with the company selling pre-built systems, broader such as mechanical keyboards and monitors as well. Their pricing is very aggressive, and if they don't have the best price on a specific item, they will match their competitors. NCIX also operates a rewards and rewards program billed for customers who offer exclusive sales, discounts, and rewards just for signing up. The company is also engaged in educating its customers and helping you make smart buying decisions, which we've seen in their NCIX YouTube channels and their support for other channels such as TechQuickie and Linus Tech Tips, all of which we love and have known in posting videos from frequently. In its nominated thread, many of us have shown your love for NCIX, and specifically mentioned that Canadian shoppers should ship from them only, since they ship using Canada Post, meaning you paid less for shipping but finding gear for you earlier. You also called NCIX's customer service for being exceptionally useful, easy to work with on RMAs and DOA parts. Plus, if you're thinking about parting out a new computer, but don't want to build or burn it by yourself, an extra \$50 on your order means they'll gather everything for you, test it, make sure it works, installs your OS, and then ships everything out of you. You can read more of his nominated threads here. NewegNeweg is a juggernaut, and for good reason. The company has been operating for ages, selling computer components and broadering of system builders and enthusiasm for years and years. For many people, Neweg is their first and last destination when it comes to Bild PC, and even for those who wind up buying elsewhere, they make a great deal of their research in Neweg First to make sure they're buying gear for them best at the best prices. Neweg doesn't skimp on the selection, either — literally everything you need to build a computer available in their online store, with fast and affordable shipping, complete with sufficient tools and options to make sure you're buying exactly what you need, nothing more and nothing less — and that all of your components are working together when you get them. Neweg has comparison tools to help you make this difficult decision between a video card and next model on them, and the sales and the discounts—spectically in the holidays—hipping forced wallets you cannot resist. The forums and customer reviews are well traveled, and while customer service has been great in my experience. Note that component manufacturers are often hanged out in the forums and in the reviews of their products as well, ensuring that customers are unhappy with offers to do any right problems if someone becomes a bad part or has another problem. Neweg also operates a pair of Dedicated YouTube channels to help you make smart decisions — vintage Neweg TV channels, and Neweg's television channels. On both are frequently mailed product reviews, unboxing videos, initial impressions of future products, and more. The wire nominated for Neweg was massive, and like any bigger detail, was filled with both praise for their fast shipping, huge selections, amazing discounts, and great customer service.... and complaining about these same things. Most of you however mark the tools that Neweg makes available help you compare products, check reviews, and learn more about any specific items you're thinking about buying. The community around Neweg -- not just its employees --- passionate, intelligent, and truly helpful. There's a reason Why Neweg was an obvious nomination here. Many of you have noted that Neweg doesn't always win out on price, but to win out on research and information, and depending on where you live, even shipping cheaper goods may mean that your gear gets to you the next day. If you need any more reason, check out the nomination thread here --- is packed with them. AmazonThe stores that sell everything also sell computer components and parts, and usually at fairly competitive prices—even better if you're an Amazon Prime membership and get free shipping on virtually all of the components you buy. You have to know what you're looking for of course — Amazon doesn't make it easy for you to participate in a PC or make sure that components are working together or are compatible with each other before you buy, but they offer a great ridiculous selection of both common parties and obsessions, new and old, so you can still find what you're looking for , either straight from Amazon or via an Amazon vendor. Prices are good enough that if you use the other tools to party out your computer, like PCPartPicker, for example, you'll wind up seeing Amazon's product list in the top two or the three most affordable versions of the parts you're thinking about buying almost every time. In the nomination thread, many of us have called out the fact that you use them to shop in other party details and now buy at Amazon almost as often if not more — largely because Amazon just has everyone else beating on price. This makes sense—they are a logistical juggernaut, and have the size and scale to compete with all other parties with electronic details while simultaneously cutting them on prices and shipping costs. Many of us even noted that you use the other sites to do your research, and then eventually wind up going with Amazon because of either free shipping or price. Boots, many of us also praise Amazon's highly liberal comments and the RMA regulations (something I can attest to—I bought some components from Amazon recently, there were shipments delayed several days—we feared that it was lost--- and Amazon had replaced replacements through me the next day, with just promises that if the original ship showed eventually that I sent it back to them) if you ever had problems with the things you ordered. You can read all the conversion stories of his nomination threads here. TigerDirectTigerDirect used to have a bit of a bad rap, but the delay came a long way to position itself as a solid option for those looking for one more place in price checks and contract notes on computer components, broader, and software. They have brick and mortar stores (although not much), but their main business is to their website, where they offer a wide selection of PC parts from memory and CPUs fully built systems and other home electronics. Prices are often worth a solid look—while you may not think of them immediately, in many cases TigerDirect can sneak in with lower prices on an in-demand item (such as a 4K controller or a popular SSD model) with plenty of stock and fast shipping your rights. They also operate a fan newsletter that's loaded with exclusive deals just to sign up. In its nominated thread, some of you pointed out that brick stores and mortar stores are worth a look if you have one near you, and pointed out that their inventory is solid, the sites are easy to use and browse, and while they don't have the same comparison with shopping tools that other details have , they're a great option if you're shopping around for a good price on something that can come out of stock or more expensive everywhere. Read more of his thread nomination here. Now that you've seen the top five, it's time to put them in an all-out vote to determine the Lifehacker community favorite: Mention this week's honorable jump from Electronic Fry's and Other World Computing (OWC), both of them that missed the top five by just a handful of voters. Fry's Electronics operates both brick-and-mortar and online stores packed with products, and it is there with Micro Center in that many people describe it as a bit of the geek's amusement park — a place you can go and spend all day browsing, trying out Gear for before you buy it, searching on different options, check out things you want to buy in person , and talking to others knowledge. Websites are much the same — loaded with a huge selection of products at great prices. You even describe it as Costco for computer parts, and we think that's correct. Check out his nomination threads here. In the same strawberry, Other World Computing has been in business for ages, and while it was once site primarily a site for Mac owners to get specialized gear for their computers (and found huge prices on Apple gear for which to often beat out Apple directly — not to mention the first one where they offer upgraded and refurbished Apple products at great prices) the site grow to be a great resource for all computer buyers, whether you're shopping for a new PC or just looking for agitation for your current one. Check out his nomination threads here. Want to make the case for your personal favorite, even if it wasn't included in the list? Remember, the top five are based on your most popular nomination in the call for countdate threads earlier in the week. Do not only complain about the top five. Let us know what your preferred alternative is--- and make your case for it---in discussions below. The five Hive is based on readers' nomination. Similar to most Hive Five posts, if your favorite was left out, he didn't get the nomination required in the call for post contenders to make the top five. We understand it's a bit of a popularity contest. Make a suggestion to Hive's Sync? Send us an email to tips +hivefive@lifehacker.com!Title photo by teknoeric. Technical.
